

Pick & Stack Double Bale Handler

The **Cashels Pick & Stack Double Bale Handler** has been developed to cater for the transport and stacking of two 4 foot wrapped bales without damage to film. This new rugged design combines two existing Cashels designs, the Pick & Stack single frame and Ducks Foot Bale Handler, into one.

This gives the farmer/contractor a new double bale handler solution that minimises the time from field to storage - without compromise to bale integrity - but critically also allows bales to be stacked two high at the chosen storage destination.

The first round bale can be picked using either side of the bale handler. This bale is raised to give sufficient ground clearance to collect the second bale on the empty side. When the second bale has been collected, both bales are moved into position for transport. At storage destination, bales can be stacked as required - up to two high. All this can be achieved without leaving the tractor seat.

Key Features

- Transport two 4 foot wrapped bales
- Stack bales two high
- Heavy duty construction
- Minimise time from field to storage
- 3-Point Linkage as standard, quick attach options available

Length (mm)	Width (mm)	Max Lift Height (mm)	Linkage	Load Capacity	Net Weight (kg)	Tractor (HP)
1390	2400	1250	CAT 2	2 Bales/1500kg	450	100+
